

Not Just Any Biofuel

MSC Biofuel Solution delivers CO₂ savings by replacing conventional fossil-based fuel with a second-generation biocomponent derived from used cooking oil (UCO).

We only use biofuel that is responsibly sourced and accompanied by a Proof of Sustainability certification issued by internationally recognized bodies.

You can choose MSC Biofuel Solution along any trade lane or route, as biofuel is bunkered and used across MSC's network. In fact, the Mass Balance mechanism allows us to deliver emissions savings regardless of the bunkering port, trade lane or route.

Episode 3

"From Ambition to Action"

Meet Allen Clifford, MSC Executive Vice President.
